

Jake Armour

Senior Frontend Developer · Vue 3 · Nuxt · TypeScript

jobs@jakearmour.com · Telford, United Kingdom · Remote · Eligible to work in the UK · github.com/jake-armour · linkedin.com/in/jakearmour

Senior frontend developer, five years in Vue and Nuxt. I build component libraries that other developers ship on, lead the frontend of company rebrands, and own performance and accessibility.

SKILLS

Vue 3 · Nuxt · TypeScript · JavaScript · HTML/CSS · Tailwind CSS · Pinia · Figma

Design systems · Component libraries · Headless CMS · Core Web Vitals · Unit testing · CI/CD · Data visualisation · Git

EXPERIENCE

Senior Frontend Developer — Spamhaus

Sep 2023 — Present

- Led two full company rebrands from the frontend, translating third-party UI/UX designs into production Vue 3, Nuxt and Tailwind CSS: a ground-up rebuild of a twenty-year-old site across 18 page templates, then a second of comparable scope when the business repositioned.
- Architected and maintained a reusable Vue 3 / TypeScript component library, now shipped on by five developers across multiple product launches, holding design consistent between applications.
- Held Core Web Vitals, accessibility and SEO steady across three public properties drawing around 1.3M monthly search impressions — through both rebrands and since, with no performance regressions.
- Gave the non-technical marketing team a hands-on playground for components they had otherwise only seen as Figma frames, cutting review cycles by letting them try the real thing with real props rather than signing off from a design file.
- Integrated Directus and PayloadCMS with Nuxt, building custom schemas and CMS-driven page templates so marketing could launch campaigns and update content without a developer.
- Raised deploy frequency and added the test coverage to support it, catching code regressions and the broken builds that CMS content changes could otherwise trigger.

EARLIER ROLES

Frontend Developer — Awin

May 2022 — Sep 2023

I contributed to the rewrite of the user platform from Vue 2 to Vue 3, including a custom component pack, then redesigned and rewrote the admin interface to align with the new v2 interface. I introduced a code coverage tool and conventional commits to make the change history easier to track, and worked with client services on reported bugs, feeding progress back through our ticketing system.

Web Application Developer — Vanti

Mar 2021 — May 2022

One of a three-person frontend team building Kahu, a desk and room booking system. I implemented a full redesign of the user application to streamline the booking journey, and helped raise test coverage — maintaining both the e2e and unit suites, and reviewing as much code as I submitted.

Web Software Developer — CGG

Jun 2019 — Mar 2021

My graduate role, on an internal web development team spread across Singapore, Crawley and Texas. I maintained the intranet the whole company used daily, and helped research and launch a new wiki to centralise the company's information in one place.

Web Technician — The British School of Brussels

Jul 2016 — Aug 2017

A placement year from my degree, maintaining the school's management information system (iSAMS), supporting staff and students day to day, and imaging teacher and student laptops ready for rollout. I also built a security application for the campus gate team, letting them check the person at the main gate against the registration plates parents had registered.

FEATURED PROJECTS

Jungleland — Timed-slot booking and deposits for a children's play centre.

Nuxt 4 · Pinia · Stripe · AWS Amplify · AppSync / DynamoDB

The Armour Wedding — RSVPs, menu choices, song requests and shared photos — a platform for our own wedding.

Vue 3 · TypeScript · Supabase · AWS S3 · Cognito Identity Pool

Cubby — A zero-knowledge password manager.

Nuxt 4 · TypeScript · Web Crypto · Postgres · Docker

Beacon — Uptime monitoring for the containers I self-host.

Nuxt 4 · TypeScript · Drizzle · Postgres · Docker

Seven detailed case studies at jakearmour.com/work — full write-ups and screenshots showing how each was built and the impact it had.
